PART I—GUIDE OVERVIEW

1. What This Guide Covers

This guide presents MC Artworks Studio from the visitor's point of view and covers the entire website. The architecture, code, database, and WordPress/WooCommerce integration are documented separately in the technical documentation.

2. Overall Site Flow

The site includes an intro screen, faction selection, and the main commercial pages. After choosing NOD or GDI, the main menu provides access to Home, Shop, Bundles, Gallery, and Our Services.

First Visit → Multimedia Intro → NOD / GDI Selection → Menu → Home

Shop → Artwork → Add to Cart → Side Cart → Cart → Checkout → Order Received → Emails

PART II — ENTRY AND FACTION SELECTION

3. First Visit to the Site

On the first visit, an animation featuring the MC Artworks Studio logo appears. The presentation can vary in color and animation; when it ends, it transitions to a presentation image that acts as a bridge to the multimedia intro.

Red Variation

Violet Variation

Presentation image shown before the multimedia intro.

Interaction

The visitor does not need to choose anything at this stage. The flow advances automatically to the intro.

4. Multimedia Intro — Initialization

After the presentation, the site displays an introductory screen. This visual transition appears before the main HUD: the interface does not yet ask the visitor to choose a faction and prepares access to the multimedia panels.

Initialization screen shown before the intro HUD.

The progress bar, sliding gates, and audiovisual treatment reinforce the feeling of entering a video-game interface.

4. Multimedia Intro — Active Interface

Once initialization is complete, the multimedia HUD appears. The screen combines two video panels, visual information, a music track list, the Continue button, and the sound control in the lower-right corner.

Intro state showing both feeds, the music panel, and the control used to continue.

What the Visitor Can Do

- Select a music track from the music panel.
- Enable or mute sound using the button in the lower-right corner.
- Watch both video panels while remaining in the intro.
- Press Continue to proceed to faction selection.

4. Multimedia Intro — Second HUD View

The intro does not yet apply either the NOD or GDI visual identity to the site: it displays content associated with both factions at the same time. The feeds may show different scenes while the HUD structure remains unchanged.

Another view of the same intro HUD, with different content playing in the two feeds.

Result

Pressing Continue during the first visit takes the visitor to the NOD / GDI faction-selection screen.

5. Faction Selection — Loading

Before the choices appear, the faction-selection screen displays its own loading sequence. This stage visually separates the intro from the moment when the visitor chooses the visual identity used throughout the site.

Loading sequence shown before the Choose Your Faction screen.

The selection interface appears once loading is complete.

5. Faction Selection — Initial State

The Choose Your Faction screen presents NOD on the left and GDI on the right. Each side has its own audiovisual identity and a JOIN button. At this point, no selection has been saved yet.

Initial state: NOD and GDI are visible at the same time.

Visual Styles

- NOD uses a dark red visual style.
- GDI uses a blue-and-yellow color palette.
- The final selection is saved only after confirmation.

5. Faction Selection — JOIN Hover Preview

Hovering over either JOIN button activates the corresponding presentation. The change is only a preview and does not confirm the faction yet.

NOD Preview

GDI Preview

Interaction

The visitor can move the pointer between the two options and compare their presentations before clicking.

5. Faction Selection — YES / NO Confirmation

Clicking JOIN activates the confirmation state and displays the question ARE YOU SURE? The visitor can cancel with NO or confirm with YES.

NOD Confirmation

GDI Confirmation

Result

NO returns the option to its initial state. YES saves the selected faction and continues with the site-entry transition.

6. Transition into the Site

After the faction is confirmed, a faction-specific transition plays before the main navigation appears. The sequence preserves the selected visual identity and ends with the Access Granted message.

NOD Initialization

GDI Initialization

Access Granted - NOD

Access Granted - GDI

From this point on, the main pages retain the same functionality, while colors, videos, and visual treatment change according to the selected faction.

7. Main Menu — NOD

The main menu can be opened from different sections using the Menu button. In NOD, it appears as a dark red interface with audiovisual cards.

Main menu with the NOD visual style.

Available Options

- Home, Shop, Bundles, Gallery, and Our Services.
- View Intro to replay the intro.
- Change Faction to return to the NOD / GDI selection screen.

7. Main Menu — GDI

The GDI version provides the same options and navigation flow. Only the visual identity changes, with blue and yellow tones and faction-specific media assets.

Main menu with the GDI visual style.

Continuity

The menu content is the same for both factions; the difference lies in the audiovisual treatment.

8. Home — NOD

Home serves as an audiovisual presentation of the site, using looping scenes and a central interface. The Enter Interface button opens an expanded view without leaving the page.

NOD Home with the Enter Interface call to action.

Expanded view opened from NOD Home.

8. Home — GDI

The GDI version behaves the same way. The visitor can watch the scenes, open one with Enter Interface, and close the expanded view to continue browsing Home.

GDI Home.

Expanded view opened from GDI Home.

PART IV — SHOP AND CART

9. Shop — NOD Overview

Shop displays the artworks in a card grid. The filter panel appears on the left, while each card shows a preview, name, price, category, and the Add to Cart action.

NOD Shop with side filters and active previews.

Main Elements

- Search, filter, and category panel.
- Product cards with audiovisual previews.
- Price and category for each artwork.
- Add to Cart and access to the cart.

9. Shop — GDI Overview

The commercial structure is the same in GDI. The grid, filters, purchase actions, and navigation remain unchanged; only the colors, background, and visual treatment differ.

GDI Shop with the same catalog structure.

Comparison

NOD and GDI are not separate stores. They are two visual identities applied to the same catalog.

10. Product Card and Progressive Loading

Visible cards transition from an initial image to their video previews. Playback is activated progressively as the visitor moves through the page, avoiding an attempt to play the entire catalog at once.

Before Playback

Active Preview

Expanded detail of several cards showing price, content, and the Add to Cart action.

Visible Result

The grid first appears in its initial state, and previews activate as products enter the visible area.

11. Filters and Search

The side panel narrows the catalog by price, text search, Comic Balloon Text, and categories. Use Apply Filters to apply the selected criteria, while Reset clears the current filter state.

Expanded detail of the Shop side panel.

Visible Behavior

- Text search requires at least three characters before it can proceed.
- The visible categories narrow the grid without leaving Shop.
- When filters are applied, the results change while the rest of the interface remains visible.

12. No Results

When the filters return no matches, a No Results state is displayed. This is not a site error: the page simply indicates that the current search does not match any products.

No Results - NOD

No Results - GDI

What to Do

The visitor can change or reset the filters to search the catalog again.

13. Expanded Artwork View

Selecting a card preview opens the artwork in an overlay. From this view, the visitor can move to the next item or return to the previous one without closing the modal.

Expanded Artwork - NOD

Expanded Artwork - GDI

Result

After closing the expanded view, the visitor returns to the same position in Shop and can continue comparing products.

14. Add to Cart and Side Cart

Each card includes Add to Cart. When it is pressed, the product is added to the cart and the interface allows the side cart to be opened through View Cart or the cart icon.

NOD side cart displayed over Shop.

From the Side Cart

- Added items and their prices are displayed.
- Products can be removed without leaving the page.
- View Cart opens the full Cart page.
- Continue Shopping returns focus to the current page.

15. Item Limit

Each order can contain up to ten items in total. Both individual artworks and bundles count toward this limit. If the visitor attempts to add another item, the site displays a warning and keeps the existing ten items in the cart.

Warning displayed when the visitor attempts to exceed the ten-item limit.

Result

The eleventh item is not added to the cart.

16. Cart Page

Cart brings together the items before checkout. Each line shows the product, subtotal, and available customization controls, while the panel on the right summarizes the order total and provides the next step.

NOD Cart with two artworks and the order summary.

Flow

Side Cart → View Cart → Review Products → Customization → Update Cart → Proceed to Checkout

17. Customization

MC Artworks Studio adds its own customization options to Cart. Comic Balloon Text appears only for artworks that support speech-bubble text, while Frame Color lets the visitor choose the product frame color.

Expanded detail of the cart lines and their controls.

Visible Controls

- **Comic Balloon Text:** text field with a visible 50-character limit.
- **Frame Color:** frame color selector.
- **Update Cart:** saves the changes before proceeding.

Example

The visitor can enter “Welcome back,” choose Blue as the Frame Color, and press Update Cart. These options remain associated with that artwork throughout the purchase flow.

18. Empty Cart

If the last item is removed, Cart enters an empty state. The site displays the page without product lines and then shows a visual transition that returns the visitor to Shop.

Last Item Before Removal

Empty Cart

Transition shown before returning to Shop.

PART V— CHECKOUT AND ORDER

19. Checkout—NOD

From Cart, Proceed to Checkout opens the final form. Checkout has been streamlined to include only the information required by the project flow: Artworks Name, First Name, and Email. The order summary remains visible on the right.

The screenshot shows a web browser window with the URL `mcartworkstudio.com/checkout/`. The page has a dark theme with a red grid pattern. The word "CHECKOUT" is displayed in large, glowing red letters at the top. A "menu" button is in the top right corner. The main content is divided into two columns. The left column contains a form with the following sections:

- NAME FOR YOUR ARTWORKS**
ENTER THE NAME THAT WILL APPEAR ON YOUR ARTWORKS *
- BILLING DETAILS**
FIRST NAME *

EMAIL *

The right column contains an order summary table:

PRODUCT	SUBTOTAL
ADA WONG #1 RESIDENT EVIL I VARIATION #3 x 1 COMIC BALLON TEXT: default FRAME COLOR: default	\$20.00
ADA WONG #2 RESIDENT EVIL I VARIATION #1 x 1 FRAME COLOR: default	\$20.00
Subtotal	\$40.00
Total	\$40.00

Below the table is a button labeled "PAY WITH PAYPAL (MANUAL)" and a large orange button labeled "PAY WITH PAYPAL".

NOD Checkout with the form, order summary, and Pay with PayPal (manual) method.

Confirmation

- The visitor completes the required fields.
- The visitor reviews the products and total.
- Pay with PayPal (manual) submits the order and continues to the manual payment step.

19. Checkout—GDI

The GDI version presents the same form and the same flow. The difference is purely visual: the fields, summary, and final action remain unchanged.

CHECKOUT	
NAME FOR YOUR ARTWORKS	
ENTER THE NAME THAT WILL APPEAR ON YOUR ARTWORKS	
BILLING DETAILS	
FIRST NAME	
EMAIL	
YOUR ORDER	
PRODUCT	SUBTOTAL
ENCLAVE #4 FALLOUT COLOR #2 x 1 FRAME COLOR: default	\$20.00
ENCLAVE #5 FALLOUT COLOR #1 x 1 FRAME COLOR: default	\$15.00
ENCLAVE #6 FALLOUT COLOR #2 x 1 FRAME COLOR: default	\$15.00
Subtotal	\$50.00
Total	\$52.00
PAY WITH PAYPAL (MANUAL)	
PAY WITH PAYPAL	

GDI Checkout.

Validation Feedback

If any required information is missing, the form must be completed before the visitor can continue.

20. Order Received and Manual Payment

After checkout is confirmed, WooCommerce creates the order and the site displays the Order Received screen. No automatic payment gateway is launched, and no direct charge is processed on the page.

Post-checkout screen with instructions and the order summary.

What Happens Next

- The order is recorded.
- The page explains how to complete the manual payment.
- The customer receives the instructions by email.
- The administrator receives a separate email containing the new order details.

21. Customer Email

The customer receives an HTML email containing the order summary and the instructions required to complete the manual payment through PayPal.

Email Introduction and Instructions

Order Summary

Visible Content

- Order number and date.
- Artworks Name and the products included in the order.
- Customizations and total amount due.
- Instructions for completing the manual payment.

22. Administrator Email

The administrator receives a different message from the one sent to the customer. Its purpose is to identify the new order quickly and provide the information needed to review and manage it.

Administrator email containing the new order details.

Key Information

- Order number and customer information.
- Products, customizations, and total.
- Access to order management in WordPress / WooCommerce.

PART VI — BUNDLES

23. Bundles — NOD

The Bundles page groups related artworks into packages. In the configuration shown, each card contains three artworks and lets the visitor view the price and add the bundle to the cart as a single item.

Initial NOD loading state: each position displays the “B” placeholder.

NOD Bundles after the previews have loaded.

23. Bundles—GDI

The same structure is presented with the GDI visual style. The initial placeholders are replaced by previews of the artworks included in each bundle.

Initial GDI loading state.

GDI Bundles after loading.

24. Bundle Filters and Pagination

The Bundles page includes search, categories, price controls, Apply Filters, and Reset. When there are more results than fit on one page, pagination allows the visitor to continue browsing the bundles.

Pagination controls displayed below the Bundles results.

Continuity

Filters are applied to Bundles without turning the page into a separate store: the visitor keeps the same navigation and cart system.

25. No Results and Mixed Cart

If the filters return no matching bundles, a No Results state is displayed. Individual artworks and bundles can also coexist in the same cart.

No Results in NOD Bundles.

Mixed cart containing individual artworks and bundles.

Global Limit

All cart items count toward the same ten-item maximum, whether they are individual artworks or bundles.

PART VII — GALLERY AND SERVICES

26. Gallery — NOD

Gallery organizes visual compositions into panels. The loading state appears first; once loading is complete, the images become available with interactive controls overlaid on each panel.

NOD Gallery while loading.

NOD Gallery with visible content.

26. Gallery — GDI

The GDI version keeps the same panel structure and actions. The colors, frames, and faction-specific visual assets change.

GDI Gallery while loading.

GDI Gallery with visible content.

27. Gallery Controls

Each panel includes overlay controls for switching between the still image and video and for managing video audio.

Visible Controls · NOD

Visible Controls · GDI

Controls

- Camera icon: switches to the video associated with the image.
- Eye icon: returns to the still image.
- Sound icon: enables or mutes the video audio.

Still Image → Camera → Video → Sound On/Off → Eye → Still Image

28. Our Services — NOD

Our Services presents MC Artworks Studio's service offering in three main categories: Image Editing, Artwork Creation, and Realistic Photomontages. The screenshot is shown at a larger size on this page so the content of the cards remains readable.

Our Services with the NOD visual style.

28. Our Services — GDI

The GDI version retains the same three service categories and the same content. The visual treatment changes to preserve the identity of the selected faction.

Our Services with the GDI visual style.

End of the Tour

From the main menu, the visitor can return to Home, Shop, Bundles, Gallery, or Our Services, replay the intro, or change factions.
